Laboratory work 1

problem 1

write a program in **C** c that:

1. prints out *"hello world!"*
2. asks the user his age.
3. tells the user how old he will be the next year.

---

problem 2

write a program in **C** c that ask the user:

- in which year he was born.
- the current year.
- an age A from 0 till his current age.

the program should calculate:

1. the age of the user
2. how many years ago the user was A years old.
